

4) git checkout -b ct coreteam/master #建立一个coreteam分支 git branch -a #查看所有分支 or gitk --all gitk #里查看所有分支 git checkout -b newbranch # 建立newbranch分支 git checkout newbranch # 切换到newbranch分支 Edit.. Add...commit git merge coreteam/master or git merge ct Resolve conflict

git push origin master #将主分支修改推送到服务器 git push origin newbranch # 将newbranch分支修改推送到服务器 5) in github, click pull request to inform the developer.

- 2) you need build newbranch to merge with remote
- 3) before you merge, you should fetch coreteam first to get latest version(maybe) 4) you need clone action first. You need follow the order.
